

# POEM OF THE WEEK

## POEM OF THE WEEK (ON A THEME OF TIME)

### Introduction

I am writing a series of poems based on and around the theme of time. There are currently nine; there will be more. Over the next months, I will publish these, one poem at a time. They are numbered (mostly for my reference); they can be read in any order.

### **RHYMIN' TIME (POEMS ABOUT TIME)**

6.

#### IN THE END

Will Time End?  
Can time end?  
Imagine, for a second  
We might argue it could

Imagine, further that a universe  
Beyond our comprehension  
is behaving like a wind-up clock  
Running out of energy

(That's why it needs winding up)

It's only imagination!

Time complexity  
And space complexity  
(Is there such a thing?)  
(Yes, there is.)

Is defined as  
"The time complexity of an algorithm  
quantifies the amount of time taken by an algorithm  
to run as a function of the length of the input"

It is a computer application

Different, it is to "Spacetime"  
Defined as

"There are no missing points in space or instants in time,  
and both can be subdivided without any apparent limit  
in size or duration."

Time is defined as a continuum  
And is a fourth dimension

Do you need clarification?  
Consider this  
If time is a continuum  
A fourth dimension

Whether we survive  
The ravages of time  
(getting poetic!)  
Time will remain

Uninterrupted  
Independent  
Mysterious

Why was/is there never enough?
